

## Important Instructions for Apple Users

**Don't worry, you only need to do this the first time, and only if you see this error when first opening the app.**

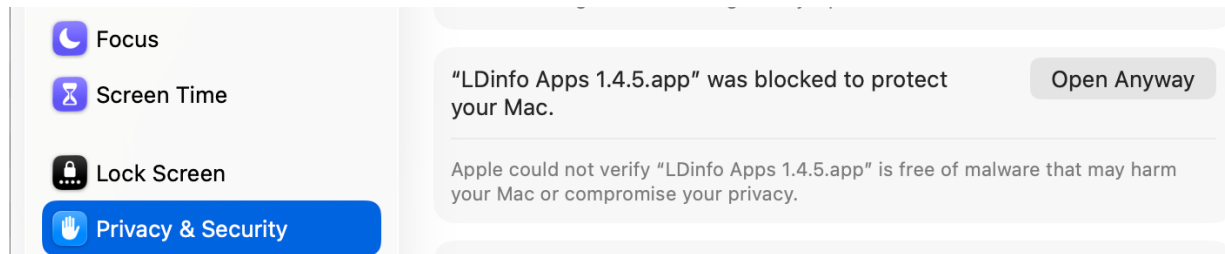

If you encounter the following error when first opening the app:

It simply means that the app is not "officially" registered with the Apple App Store. To fix this, open System Settings (under the Apple menu), select "Privacy & Security" scroll down to "Privacy" then (depending on how your Mac is configured) either select "Allow applications from Anywhere,

Or, select "Open Anyway"

Which will bring you to the next warning window when you should simply click the “Open” button to open the app.
